

USING KLEER® NAIL STICK TWO-PART PUTTY

GET READY

- Remove any dirt, dust or other contaminants prior to use.
- For best results, warm Kleer Nail Stick to room temperature before using.
- Wear protective gloves. Remove Kleer Nail Stick from packaging and cut off a small piece.
- Work the two-part putty in your hand to thoroughly mix the two parts. You may notice heat being generated as the two parts mix. You will know the putty is sufficiently blended when it is a solid, uniform color.

Note: Kleer Nail Stick starts curing quickly. Open time is 20–25 minutes. Work in small batches that can be applied within 10 minutes and place any remaining product in the original tube and seal cap.

APPLYING KLEER NAIL STICK

- Use your finger to apply putty to nail holes or other surface imperfections.
- Remove any excess putty with a putty knife or other hard, straight object before the product hardens.
- Kleer Nail Stick cures in 2–3 hours to an off-white or light grey color. After curing, it can be drilled, sanded and painted.
- Place unused product back in the original tube and seal cap securely for storage.
- After use, clean tools and hands with soap and water.
